Event 4: Report on Faculty Development Program- Leveraging Research through Power BI for Data Visualization & NVIVO for Qualitative Analysis

The prime objective of this FDP is to acquaint academicians, research scholars & corporate professionals with the basics of research, contemporary research methods, and techniques of Advanced Research Methodology. This FDP addresses all your questions regarding qualitative research- its methods, needs and tools. Qualitative studies are helpful to understand why and how. Qualitative approaches are used when the potential answer to a question requires an explanation, not a straightforward yes/no. Generally, qualitative research is concerned with cases rather than variables, and understanding differences rather than calculating the mean of responses. In-depth interviews, focus groups, case studies, and open-ended questions are often employed to find these answers. The beauty of qualitative research is that it will organize, analyze and visualize mixed media and unstructured information by providing tools for classifying, sorting and arranging your data in ways that enable the identification of themes and patterns. Keeping in view the importance of qualitative research nowadays, this FDP is contemplated with an aim to familiarize the participants with software-

based statistical tools & techniques in research and provide an opportunity for the participants to interact and learn from experts. This vital FDP will enable the participants to learn how to apply recent techniques in

management, journalism, law & IT research such as data analysis using Power BI, and Qualitative Analysis through sentiments using NVIVO, Mendeley for managing references, using interactive tools for enhancing teaching effectiveness.
